

## PRODUCT DESCRIPTION:

Acoustic flat and radial reflector panels enhance room clarity by directing sound energy precisely where it's needed. Flat reflector panels provide clean, controlled sound reflections that improve speech intelligibility and musical detail, while radial reflector panels gently spread sound across wider areas to create a more natural, immersive acoustic environment. Together, they help shape balanced, vibrant acoustics without absorbing sound, making them ideal for auditoriums, performance spaces, and rehearsal rooms seeking added projection and definition.

## Applications:

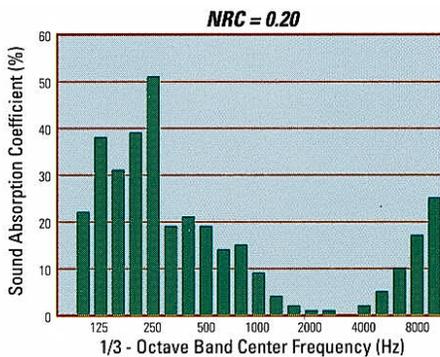

- Auditoriums
- Performance venues

## Features:

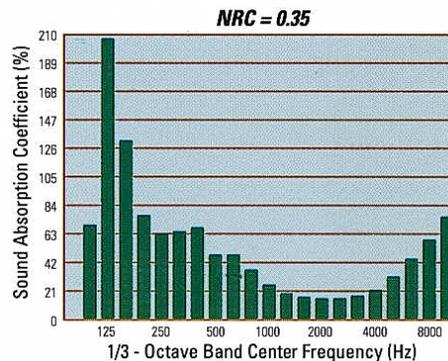

- Rigid FRP Construction
- Available in White Gel Coat, Paintable Gel Coat, or Fabric
- 9 Radial Dimensions, 2 Flat Dimensions
- 10' Radius for Curved panels
- Class A per ASTM E84
- Wall or Ceiling mounting

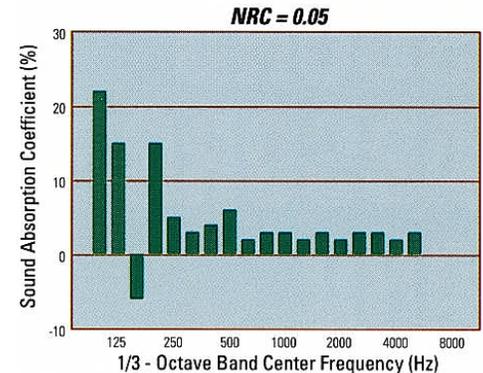

Plain Reflector

Reflector with optional Absorber

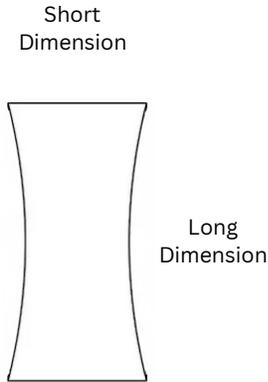

Reflector with optional Liner

Available Dimensions

### Radial Reflector Dimensions

Length	Width	Radius
